Let's Start!

Which of the hottest IT positions would you fit in?

Learning Outcome:

Identify key information about people's jobs and places of work in spoken or written contexts.

Identify key information about people's jobs and places of work in spoken or written contexts.

Ask your partner:

- What IT job positions do you know?
- What position would you like to have? Why?

Can Do Statements:

- I can write about duties and responsibilities related to job positions in IT.
- I can ask questions related to jobs in information technology.
- I can compare different jobs in the IT field in a written way.

Let's Explore!

The Boom* of the IT Job Positions.

*A "boom" means a sudden progress and increase in something.

Instructions: Read the text below.

Speaker: Welcome to our annual IT conference. In this opportunity, we will discuss some important facts related to different jobs in the IT field. I want you to take notes because we will carry out an activity later. Let's start! According to a recent survey, the hottest jobs in IT are Java Developer, .Net Developer, and Data Modeler. As you must know these jobs have specific differences. For instance, a Java Developer is better at managing Web browsers than a Data Modeler. A .Net Developer has to code faster than a Java Developer.

Attendee: Excuse me; is it easy for a company to find these kinds of professionals?

Speaker: I would say that it's easier to find a Java developer than a Net Developer or a Data Modeler.

Attendee: What's the difference between a Data Modeler and a Database Administrator?

Speaker: A Data Modeler must work harder than a DBA since the first one monitors the primary design until its final production.

Attendee: What will be the panorama for IT jobs in the future?

Speaker: There will be more occupations in IT; it also depends on the upcoming events. But you can be sure that with the current boom of technology, people will need more new professionals that handle new technological challenges.

Speaker: Well, I will conclude by asking you to write a short text whose title will be: Duties and responsibilities related to job positions in IT. You must describe some of the principal jobs and make a parallel between them. Don't forget to name important duties such as developing applications, updating programs, testing platforms, making defrags, storing confidential information, solving cryptic codes, implementing projects, handling customers' expectations and having problem-solving skills.

Let's Practice!

Carlos and Angela talk about the conference.

Instructions: Read the dialogue. Underline all the sentences that are not true.

Carlos: I couldn't go to the conference. What was the topic?

Angela: IT jobs like java developer, data modeler and the project manager.

Carlos: So, did those positions be the hottest jobs of the future?

Angela: They will! According to the speaker, companies will not need more of these professionals with the developing of technologies.

Carlos: Will a company easily contracts these professionals?

Angela: Yes, because of the advance in these technologies. Carlos: What will is the scenery of these jobs in the future?

Angela: There will be better paid occupations.

Let's Practice!

Angela compares different IT jobs.

Instructions: Select the correct option to correctly complete each sentence.

1. The cryptic codification of the Net Developer (are longer / is longer / is longest) than the data modeler.
2. The data modeler work (is heavier / is heavy / are heavier) than a Java developer because he has to ensure the productivity of the program.
3. Java developers have to (work best / work better / work well) with Web browsers like Google and Opera than other professionals.

Extension Activity

The hottest IT jobs in your community.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Do some research about the most important IT jobs in your community.
- Make a chart comparing these jobs
- Share with a partner.

Self-Assessment

Yes

No

1. I research about the most important IT jobs in my community.

☐ ☐

2. I make a chart comparing these jobs.

☐ ☐

3. I share with a partner.

☐ ☐

Target Words

- **Java** (noun): computing program language that lets a program run in any device
e.g. According to a recent survey the hottest jobs in IT are: Java Developer, .Net Developer, Project Manager and Data Modeler.
- **skill** (noun): ability for doing something
e.g. A project manager is stronger in communication skills than professionals named before.
- **modeler** (noun): someone who designs the performance of something
e.g. What's the difference between a Data Modeler and a Database Administrator?
- **monitor** (verb): to supervise
e.g. A Data Modeler must work harder than a DBA since the first one monitors the primary design until its final production.
- **parallel** (noun): a comparison between two or more subjects
e.g. You must describe some of the principal jobs and make a parallel between them.
- **platform** (noun): interconnected computers that run the same programs
e.g. Don't forget to name important duties, such as developing applications, updating programs, testing platforms and others.

Learning Points

Comparatives to Talk About Job Positions, with Short Adjectives.

You use **comparatives** to indicate the differences between things, people, animals or, in this specific case, job positions.

Comparatives with short adjectives

Adjectives with one or two syllables are considered **short adjectives**.

See the chart:

SHORT ADJECTIVES 1-2 SYLLABLES
Cheap Hard Quiet Heavy Nice Short Long Easy Busy

To make a comparison with **short adjectives** add the suffix "**er**" to the adjective followed by the conjunction **than**:

Adjective + **er** + **than** + complement

Example:

*I consider that my job as Java developer is quite **harder** than the Project Manager job.*

There are some exceptions for some adjectives:

SHORT ADJECTIVES SPELLING RULES		
Adjectives ending in -e	Adjectives ending in -y	Adjectives ending in c + v + c
As the adjective ends in -e, you just add -r	As the adjective ends in -y , you need to replace -y for -i and next add -er	As the adjective ends in c + v + c, you have to double the last consonant:
Example: • Nice → Nicer	Example: • Easy → Easier	Example: • Big → Bigger

Learning Points

There are some irregular verbs which don't follow the previous rule because they totally change:

IRREGULAR ADJECTIVES		
Good	gooder	Better
Bad	bader	Worse
Far	farer	Farther/Further
Little	littler	Less

Examples

- *For instance, a Java Developer is better managing Web browsers than a Data Modeler.*
- *And a Project Manager is stronger in communication skills than the professionals named before.*
- *A Data Modeler must work harder than a DBA since the first one monitors the primary design until its final production.*

Useful Tech Terms.

Technology is a wide field that is constantly updating and, therefore, creating new terminology.

It's essential for an IT professional to know well all these new words or expressions. Check the following chart to learn a little bit more about it:

TECH TERMS	
1. Error 404	When a requested URL is not found it appears the message Not Found 404 . So, you can use this expression when something is not working or when you don't have any idea about something.
2. Brain dump	To clear out something of any previous information.
3. Cryptic	It means that something is difficult to understand. This happens regularly in computing when, by a read error, words are routed from one program to other.
4. Deep dive	To explore something in detail.
5. Defrag	It's the abbreviation of defragmentation. It means to clean up something, such a computer program to make it work faster.

Example

- *Don't forget to name important duties, such as developing applications, updating programs, testing platforms, making defrags, storing confidential information and solving cryptic codes.*
