Let's Start!

Let's talk about security in computer systems.

Learning Outcome:

Identify key information about people's jobs and places of work in spoken or written contexts.

Identify key information about people's jobs and places of work in spoken or written contexts.

Ask your partner:

- Why is a computer security specialist important in a company?
- Have you ever had any problems with the security of information?

Can Do Statements:

- I can talk about duties and responsibilities related to job positions in IT.
- I can explain the importance of a computer security specialist in info systems.
- I can talk about the possible risks related to hacking at work.

Let's Explore!

The company needs a security systems specialist.

Instructions: Read the text below.

Bruno: Hi, Kelly! How's it going?

Kelly: Hello, Bruno! I'm in a hurry, I have a lot of things to do today.

Bruno: Oh, I'm sorry, but I need to talk to you.

Kelly: Really? Can it be later?

Bruno: No, sorry. It's really urgent.

Kelly: OK. Please, sit down.

Bruno: Thanks. Well, the company doesn't have a computer security specialist, and I consider that it's fundamental.

Kelly: Hmm. We have many engineers; In the case of any problem, they can solve it instantly. I don't think we need that many computer specialists; it can be like reinventing the wheel!

Bruno: Yes, but they don't have to take care of networks all the time. Imagine that we have a security problem that threatens to make us lose our information systems. That's when a computer security specialist is necessary since their main duties and responsibilities are related to security measure implementation. They can protect the company from cyber-attacks, such as hacking, and they can also avoid data loss.

Kelly: What do you mean by hacking?

Bruno: Hacking is an unscrupulous and unauthorized access to private systems with the purpose of targeting companies to steal valuable information. Hackers can manipulate this information and bring the computer systems to a halt.

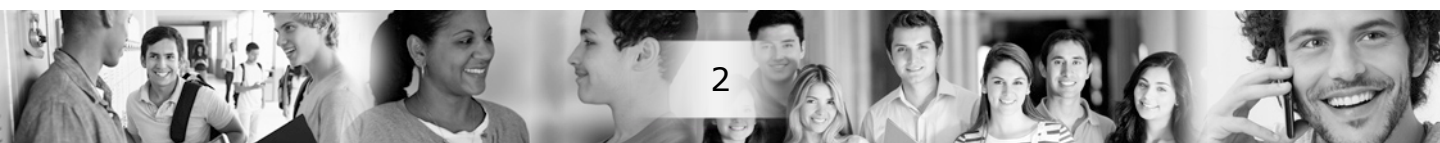

Kelly: We can't take that risk! Hmm, you're right! We don't have the skills to solve those problems now because we aren't security specialists.

Bruno: Exactly! Moreover, a computer security specialist is really important because he can implement recovery plans in case of a security breach. He can install a firewall and train our staff on this security procedure. So, in this way, we don't have to manage the company's security alone because we can count on a professional for that matter.

Kelly: All right! Can you help me with that, please?

Bruno: Why me?

Kelly: Because you are the expert; it's not rocket science!

Let's Practice!

Bruno gives more detailed information about cyber-security.

Instructions: Select the correct answer to complete the sentences.

- Hackers _____ info systems if you don't have a computer security specialist.
 - can access
 - can to access
 - can
 - can accessing
- These specialists _____ your company implement a security plan.
 - can help
 - can helping
 - can't helped
 - can hold
- Security specialists _____ networks, so companies don't have to worry about cyber-attacks.
 - can monitors
 - can monitored
 - can monitor
 - can monitoring

Let's Practice!

IT Jobs and Cyber-Crime*.

*"Cyber-crime" is any illegal activity using a computer or mobile devices with internet access.

Instructions: Select the correct answer.

- Which one is not a responsibility of a security specialist?
(Hint: They don't have to set up storing places.)
 - Designating access privileges and controlling resources
 - Providing technical advice to colleagues
 - Protecting systems against unauthorized access
 - Programming And Optimizing Databases
- A consequence of a cyber-attack can be _____.
(Hint: When they steal information)
 - intellectual property theft
 - to give colleagues technical advice
 - to ensure operational security
 - risk analyses and security assessments
- When you don't think that something is very difficult to do or understand, this is the idiom that you can use.
(Hint: It is not as complicated as the scientific method.)
 - Reinventing the wheel
 - Pulling the plug
 - It's not rocket science.
 - Blowing a fuse
- What can a security specialist report?
(Hint: They are supposed to report a breach.)
 - Analyses
 - Violations
 - Protocols
 - Upgrades
- When a company doesn't care about security, a hacker can take advantage of different access methods to _____ computer systems and networks.
(Hint: They will try to disrupt and corrupt them.)
 - analyze
 - sabotage
 - repair
 - recover

Extension Activity

Do you know computer security specialists in your community?

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Find information about the job of a computer security specialist.
- Write a description of the job using the verb can to define the possible duties of this professional.
- Create a presentation using the sentences you wrote.
- Share your research with a partner.

Self-Assessment

Yes

No

- I find information about the job of a computer security specialist.
- I write a description of the job using the verb can to define the possible duties of this professional.
- I share my research with a partner using a presentation.

☐ ☐

Target Words

- **target** (verb): to have as an objective for attacking
e.g. Hacking is an unscrupulous and unauthorized access to private systems with the purpose of targeting companies to steal valuable information.
- **halt** (noun): an unexpected stop in a particular activity
e.g. Hackers can manipulate this information and bring the computer systems to a halt.
- **firewall** (noun): a computer security program that protects from unknown and possible fraudulent attacks
e.g. He can install a firewall and train our staff on this security procedure.
- **threaten** (verb): to menace
e.g. Imagine that we have a security problem that threatens to make us lose our information systems.
- **cyber-attack** (noun): an inappropriate behavior in the virtual space that attempts to attack other users
e.g. They can protect the company from cyber-attacks, such as hacking.
- **loss** (noun): the event when something is missing
e.g. They can also avoid data loss.

Learning Points

Simple Present Tense Review to Talk About Duties and Occupations in Negative Sentences.

You use the **simple present tense** to talk about daily habits, facts, and duties.

Negative form

You use the following structure to make negative statements in **simple present**:

Subject + Auxiliary verb **Do / Does + Not** + Main verb in base form + Complement

Examples:

*They **do not have to** take care of networks.*

*She **doesn't work** as an IT specialist.*

Notice that once you use the auxiliary verb does with the third person singular (**he, she, and it**), the main verb drops the **s** or **-es** used in affirmative statements.

Examples:

*She **works** at a software company. (affirmative form)*

*She **doesn't** work at a software company. (negative form)*

These are the two auxiliaries you use in the negative form of the **present simple tense**:

Do	Does
I	He
You	She
We	It
They	

Examples

- They **don't have to** take care of networks all the time.*
- We **don't have to** manage the company's security alone because we can count on a professional for that matter.*

Learning Points

Idioms on Technology.

Idioms are important in all languages since they become a different way of saying something with a new connotation.

Some of these idioms come from the technology field. As examples, here you have these three common idioms:

Technology Idioms	
Idiom	Meaning
1. It's not rocket science.	It is not difficult to do it.
2. Pull the plug	To finish doing something
3. Reinvent the wheel	To do something that is already done; to try to come up with a new way of doing something when there is already a way to do it

Examples

- *I don't think we need that many computer specialists; it can be like reinventing the wheel!*
- *Because you are the expert; it's not rocket science!*
